

Logicalis Cloud

Flexible and efficient options for delivering enterprise applications

Are you looking for new ways to deliver IT services? Logicalis is positioned to help your company start moving forward, with private, public and hybrid cloud computing solutions that allow you to address what is becoming the “new normal”. We’ve got both the flexible cloud offerings and the expertise to help you successfully migrate your workloads.

Cloud computing is experiencing rapid growth and “C-level mindshare” for its capability to transform how IT Departments deliver services to the business. There is increasing pressure on IT to deliver superior services at a reduced cost and backed by internal SLAs. Cloud computing holds the promise of delivering this.

However, moving to cloud computing is not without operational and business risk. Some IT Managers prefer to retain control of their data centre resource but migrating to a private cloud can divert focus and resources to technology evaluation and implementation. A hybrid approach can be more complex to implement, but may provide the best compromise.

Our strategic, assessment-driven approach to applying cloud technologies to your business brings the benefits of cloud computing down to earth. There’s been enough talk about the potential of cloud computing. We want to help you to develop a roadmap that delivers the benefits of cloud, without requiring you to re-design your IT infrastructure.

“Most Australian organisations, even if not pursuing a deliberate cloud strategy, are experiencing a shift of some computing to the cloud by default.” – KPMG

Logicalis is one of very few partners to have the skills, experience and industry partnerships to deliver a full range of cloud computing options. Our cloud services are designed to help you choose and implement the specific cloud solutions that meet your exact needs and objectives, however diverse they are.

- **Consult:** Logicalis has the technical, operational and financial skills to help you evaluate where you are today and determine where you want to be tomorrow – and how to get there. Our pre-scoped offerings include a Cloud Advisory Workshop, Cloud Readiness Assessment and Cloud Implementation and Migration Planning workshop.
- **Build:** Logicalis can help you architect a strategy to take advantage of cloud in your data centre. We partner with top technology companies to implement a private cloud solution, using pre-validated designs (such as VSPEX or Flexpod) combined with our data centre methodology to reduce costs and accelerate deployment.
- **Manage:** We can monitor and manage your private or public cloud environment 24x7, to ensure you realise the greatest operational efficiency and free up staff for core IT functions – not the context tasks that running a data centre entails.
- **Operate:** The Logicalis Enterprise Cloud offerings combine the technical staff as well as the best technologies to deliver IT cloud services to your organisation from two geographically dispersed enterprise cloud platforms. These offerings include the Logicalis Private Virtual Data Centre (LPVDC) providing a complete infrastructure solution and Logicalis Virtual Workspace Cloud Edition, a complete hosted desktop offering.
